Business Management System

Adempiere Business Suite is an industrial strength software solution that combine ERP, CRM and SCM support for business processes. Adempiere is a platform for true agile ERP implementations. A powerful ERP with comprehensive solution set for Retails, Services, Hospitality and Manufacturing sector.

Though making the decision to implement a new ERP is a process that requires research and foresight. Here are three top reasons why businesses have selected ADempiere over Oracle applications, SAP and Microsoft Dynamics.

* ADempiere can scale with your business and provides affordable scalability for your growing business. With benchmarked performance & rich funcationality across financials, SCM and CRM.

* ADempiere provides low total cost of ownership

Enterprise Content Management System

Often valuable content is scattered across enterprise in forms; such as email, fax, documents and filling cabinet. Organizations often struggle with issues such as lifecycle management, version control, duplication, multi-filing and search. ECM is a comprehensive solution to manage enterprise content; Our solution provides integrated Document, records and web content management; streamlining content storage and retrieval process.

A white paper from Alfresco shows how it is possible to save, in the first year of implementation (based on a 1,000 user configuration) up to 89 percent of the cost of SharePoint purchases, and up to 96 percent of the cost of other ECM solutions e.g. IBM Filenet and opentext.

Unifed Communications / IP Telephony

The IP PABX system provide businesses infrastructure that can easily be integrated with information system, providing a robust base to implement complex communication enabled business processes.

Our UC server solution provides more then 140 traditional PBX features out of the box including enterprise class features such as Unified Messaging, VoiceMail, hot-desking, IVR, Call monitoring, Call whispering and conferencing with easier integration to business applications such as CRM, ERP and help desk.

Business Process Management

Business Process Management (BPM) software and services from Group Three help organizations optimize business performance by discovering, documenting, automating, and continuously improving business processes to increase efficiency and reduce costs. BPM enables organizations to be more efficient, more effective and more capable of change than a functionally focused, traditional hierarchical management approach.

BPM enables business to respond to changing consumer, market, and regulatory demands faster than competitors {with traditional transactional style technologies} - creating competitive advantage.

Technology has allowed the coupling of BPM to other methodologies, such as Six Sigma, to help business through complete DMAIC cycle.

Once a process is implemented; businesses can simulate changes to business process based on real-life data and easily identify resource effficieny and process bottle-necks.

Business Intelligence

Our powerful web-based BI Suite provides you with clearer historial, current and predictive view of your business operations. Create a set of Performance metrices and Benchmarks and track the organizations progress towards business goals.

A single dashboard for KPIs, graphs and powerful drill down capabilities on your dimensional data.
